Siretta
Enabling Industrial IoT

Distributors choose Siretta as their IoT supplier of choice

What do you do when you want to represent a wireless IoT supplier with unrivalled product offering?

You choose Siretta.

Across Europe, dedicated design-in distributors see Siretta as a reliable supplier they can work with… but why?

At Siretta we design and manufacture our cellular wireless product range to the highest standard and offer an unmatched range of products.

From low-cost solutions to products that include GPIO and GPS, our range of 2G, 3G and 4G standard modems cover a host of features. For a more advanced solution, our range of intelligent managed modems enable customers to transfer data over cellular network, without having to write their own software or have knowledge of how the technology operates.

Our range of 3G and 4G routers with Ethernet, WiFi and GPS options are also designed with the industrial applications in mind.

To further extend our offering, our range of antennas in the most popular wireless technologies and mounting types and variety of connectors is unrivalled. From small PCB type antennas for embedded applications to outdoor types in low signal locations with low loss cable extensions, we have solutions that help our customers get the optimum use from their wireless products.

Finally, if our customers want to test the signal strength levels for their products prior to choosing the most suitable SIM card, our SNYPER family of 3G and 4G signal strength analysers are easy to operate and provide the confidence you need when choosing a provider that will give you the best service.

So, quite simply, that is why all major component broad-line distributors have chosen Siretta as their wireless IoT supplier of choice.

Our distributors have made their choice, now it’s your turn!
