Signal Log

Maps show the location of the SNYPER test and cellular mast positions

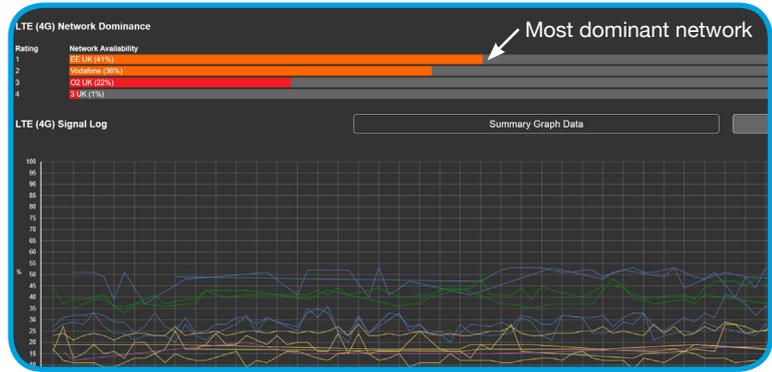

LTE (4G) Network Summary

Network	85%	70%	55%	40%	25%	10%
Vodafone	0	0 (0)	0 (0)	3 (3)	5 (2)	5 (0)
O2 UK	0	0 (0)	0 (0)	2 (2)	2 (0)	2 (0)
EE UK	0	0 (0)	0 (0)	0 (0)	2 (2)	10 (8)
3 UK	0	0 (0)	0 (0)	0 (0)	0 (0)	2 (2)

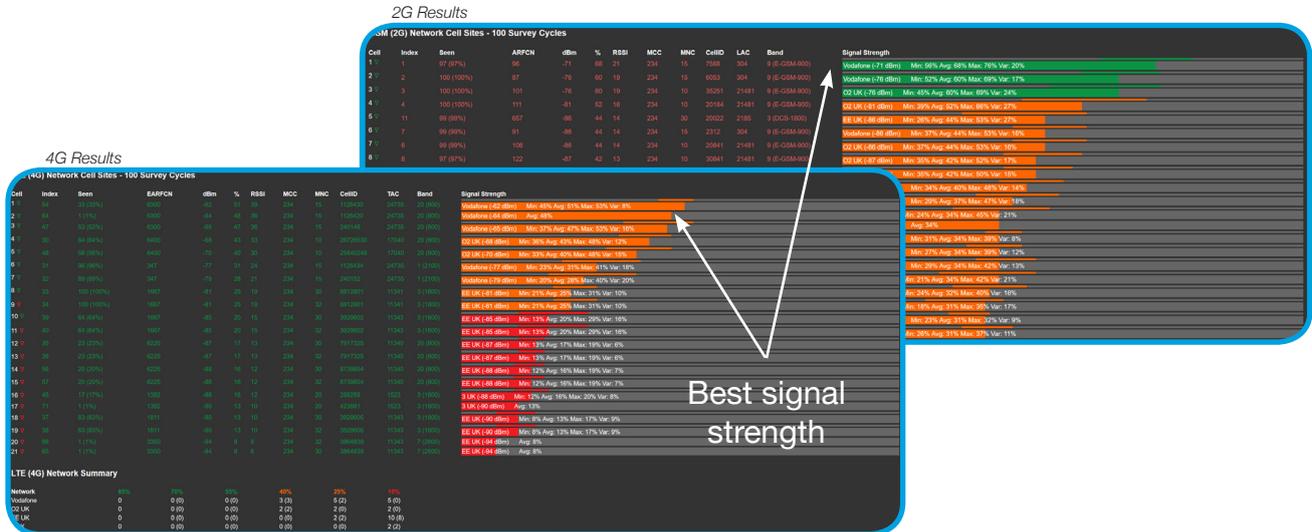

The network summary shows the number of cell towers visible in each signal strength region

Bar charts highlight network dominance in the area

Signal Logs show comparative network performance per survey

Signal strength bar charts highlight the strongest networks by technology type

Network selection is based upon analysis and interpretation of the most dominant network and signal strength. Your application requirements will play a part in the interpretation of the survey data to find the best solution for your application.

In the example shown "EE" has the highest availability 4G network but much lower signal strength. In contrast "Vodafone" has the highest signal strength but only slightly less availability, therefore "Vodafone" may be the better choice in this location.

Note: Cloud Survey is for use with the following SNYPER models, SNYPER-LTE Graphyte, SNYPER-LTE+, SNYPER-LTE+ Spectrum. For all other SNYPER variants please contact your support representative.
