

Who Are We?

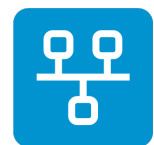

Enabling Industrial IoT

Siretta has been at the forefront of IoT applications long before the phrase became widely used.

We have a track record of providing technology solutions for companies to develop their own products, as well as non-technical customers who need an experienced team to help provide a complete solution for their applications.

In a world where new technology provides seemingly endless opportunities for new applications, the challenge remains of how to deploy the right technology and ensure consistent and reliable performance - continuously.

Siretta's products have been developed and refined over many years, creating a set of devices that many customers rely on for their mission critical applications.

Global Manufacturer of IoT Solutions

What Can We Offer?

Siretta offer a wide range of products that have been specifically designed for use in IoT applications.

- 2G, 3G and 4G Industrial Wireless Modems
- 2G, 3G and 4G Intelligent Managed Modems
- 2G/3G and 3G/4G High Reliability Industrial Routers
- 2G/3G and 2G/3G/4G Cellular Signal Analysers & Loggers
- Broad Range of High Performance RF Antennas
- High Quality, Low Loss Cables and RF Adaptors

Alongside a class-leading product offering, Siretta provides expert technical advice with dedicated support engineers to make your IoT project swift and straightforward.
